

## The new face of messaging is just around the corner

---

Are you thinking about it yet?

**Andrew Pollack**  
**President, Northern Collaborative**  
**Technologies**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

**ADMIN 2004**  
**DEVELOPER**

### About Andrew Pollack's Presentations

---

**ADMIN 2004**  
**DEVELOPER**

#### ☐ **Designed to avoid "Slideware" issues**

- To the extent possible, I have tried to put as much real information in these slides, they are not bullet points
- As they contain more real information, they are likely to contain more errors. If you find any, please send me email – I want to hear about them
- The latest versions of all my presentations, updated to correct any reported errors, are always kept on my web site.

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Agenda

ADMIN 2004  
DEVELOPER

- Who am I, Why are we here  
...and other big questions
- Messaging isn't just email
- Where we are now
- Why messaging needs a new face
- Solving the messaging problems

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Big Questions: Who am I? Why are we here?

ADMIN 2004  
DEVELOPER

- Andrew Pollack -- Northern Collaborative Technologies
  - 2003 IBM Lotus Beacon Award Winner
  - Administrator & Developer since version 2.0
  - Member of the Penumbra Group
  - Firefighter - Engine 1 - Cumberland, Maine!
  - In firefighting, just like Server Administration & Application Development, its all in the planning
- Why We're Here
  - To learn and grow as human beings
  - We and our users are overloaded with messages
  - The industry is about to change

NORTHERN  
**Collaborative**  
TECHNOLOGIES

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## **Messaging isn't just email**

---

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

**ADMIN 2004  
DEVELOPER**

### **Types of Messaging**

---

**ADMIN 2004  
DEVELOPER**

- ☐ **We're here to talk about messages as it relates to people**
  - Electronic Mail
  - Instant Messaging
  - Status Alerts
  - Telephone Answering Systems
- ☐ **Messaging in general also includes system to system communications**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## Where we are now

---

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

ADMIN 2004  
DEVELOPER

## The Home Office

---

ADMIN 2004  
DEVELOPER

- ☐ Many of us work some or all of the time from a home office
- ☐ Virtually all communication is electronic in one form or another
- ☐ We are expected to be able to respond quickly
- ☐ A delayed response may be misconstrued as not working

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## **Project teams span offices and regions**

ADMIN 2004  
DEVELOPER

- ☐ We work with people we know only through electronic messaging
  - **Meaning and expression are lost, leaving room for misunderstanding**
- ☐ Work gets done in different time zones, virtually around clock
  - **There is never a point to call the day “finished”**
  - **There is nearly always some new electronic message**
  - **Comments & Responses come in waves, often passing each other in transit**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## **We are virtually never “unreachable”**

ADMIN 2004  
DEVELOPER

- ☐ A cell phone or text messaging device is an expectation, and difficult to keep private
- ☐ Cross time zone project teams and poorly defined social rules lead to round the clock interruptions
- ☐ Even during working hours, intrusive messaging is interruptive and break concentration

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## **The meeting you can't miss**

ADMIN 2004  
DEVELOPER

### **□ Social manipulation through email**

- Electronic mail has become nearly instant
- The "copying your manager" to pressure a faster response trick
- The "copying peers" to build support for a point trick
- The "blind copy the boss" to evoke sympathy trick

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## **Other forms of messaging overload**

ADMIN 2004  
DEVELOPER

### **□ Messaging overload threatens to reduce the value of these technologies**

- "Quick" Cell phone interruptions for unnecessary discussions
- That friend who sends a different stupid joke to you three times a day
- Unsolicited advertising
- All those messages you've been "copied into" as part of social manipulation

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## **Why messaging needs a new face**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

**ADMIN 2004  
DEVELOPER**

### **Current Management Techniques Failing**

**ADMIN 2004  
DEVELOPER**

#### **□ Managing the Inbox**

- Remove items from the Inbox as completed
- Used to work well
- Inbox volume has increased dramatically
- Signal to noise ratio has become intolerable
- A single message in the inbox cannot encapsulate the thread of a task or project to represent that task

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## A "to do" flag to manage tasks doesn't work

- ☐ **Flagging a single message does not represent the task well**
- ☐ **The context of the task changes rapidly over the course of the day as more messages are transferred**
- ☐ **New messages related to a task must still be "managed out" of the inbox**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Anti-spam software is inherently flawed

- ☐ **The very definition of spam is different from person to person**
- ☐ **The tighter you try to control spam, the more false positives result in missed messages**
  - Totally unacceptable to most companies
- ☐ **Simply managing the anti-spam software becomes another task during the day**
- ☐ **For any technical anti-spam initiative to work, a large number of companies must stop accepting non-compliant messages – this is unlikely to happen quickly**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## **Current Messaging is Interruptive**

- ☐ **Our primary function at work is not to create and manage electronic messages**
- ☐ **Each “new message” alert, cell phone ring, or instant message alert takes us away from our primary focus**
- ☐ **It takes the average person about 5 minutes to return to a focused task after interruption**
- ☐ **Complex tasks can take up to 30 minutes for many people to build concentration**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## **Email is poorly suited to some messaging**

- ☐ **If the content value is short lived**
  - Recipients may not see the message in time
    - ☐ You’ve just wasted your time, and the reader’s
- ☐ **If the subject matter is sensitive**
  - It is difficult to know that your message will not be forwarded or saved for use out of context
- ☐ **If the required response is time sensitive**
  - It can take more time to get the reply than is available
    - ☐ Again, a waste of time for both the sender and receiver

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## **We have become "inbox" focused**

- ❑ **The Inbox & New Mail notification are never closed**
  - Social Pressure to respond quickly
  - Fear of being made to look poorly or to lose an important argument
  - The "ringing phone" syndrome -- knowing new messages are waiting
- ❑ **We do our "Job" between managing messaging of one kind or another**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## **Solving the messaging problems**

**Part 1 - Solutions start with social change**

**Part 2 – New technologies take advantage of the social evolution in messaging**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Solving the social aspect of the problem

ADMIN 2004  
DEVELOPER

### ☐ **Social solutions evolve over time**

- Electronic messaging is really only ten to fifteen years old, etiquette is still evolving
- Most companies are just beginning to define the ground rules formally
- Understand the nature of the content
  - Learn from the children – they're way ahead on this problem
- Let the nature of the content determine the means for communication

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## Define the ground rules clearly

ADMIN 2004  
DEVELOPER

### ☐ **Let people know if they're abusing the technology**

- Calling at inappropriate times
- Copying inappropriate people
- Responding inappropriately in haste

### ☐ **If you're the boss, do not allow yourself to be used in one of the copy or blind copy manipulation tricks**

### ☐ **Do not be trapped into responding poorly or wasting time through manipulation tricks**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## Understand the nature of the message

- ☐ **Formality – Does the message content represent a formal position or statement?**
- ☐ **Sensitivity – Is the message content something you do not want repeated?**
- ☐ **Timeliness – How long will the content maintain relevance and value?**
- ☐ **Value – is the value of the content worth interrupting the recipient?**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## Deferent media are suited to different content

- ☐ **Email is good for informal, long duration, medium value communication and is a relatively low level of interruption**
- ☐ **Instant Messaging is good for informal, short duration communication but can be highly interruptive**
- ☐ **Prepared Documents are better for long duration, formal communication of policy and direction. Their format conveys added importance**
- ☐ **Telephone calls or meetings should be used for sensitive content as they are less likely to be inadvertently forwarded and are better able to convey a clear message without misunderstanding**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## Technologies to match the social needs of messaging

---

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

ADMIN 2004  
DEVELOPER

### Transient Messaging

---

ADMIN 2004  
DEVELOPER

- ❑ **Instant messaging tools are becoming pervasive**
- ❑ **Watch the kids – if their friends are not online, they frequently will not bother with email**
  - When asked, they say that by the time the message has been received it will be irrelevant.
- ❑ **Some instant messaging technologies indicate your willingness to be interrupted**
  - Lotus started this!
- ❑ **Be aware of local laws governing the logging and storage of instant messaging conversations**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## **Document Centric Messaging**

- ☐ **A large amount of valuable email relates to a project team discussing and producing a document**
  - The document is the point, the emails about the document are at best “meta data”
- ☐ **New technologies attempt make the document the center of the context and tag the messaging as subordinate**
- ☐ **IBM Lotus Workplace and Microsoft Exchange are both moving toward this model**
  - Lotus Domino shops have built databases for this purpose, but are not using them fully

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## **Task Centric Messaging**

- ☐ **Rather than a specific document, focus is on the context of a given project or conversation**
- ☐ **Similarities in subject, sender and recipient list, and non-dictionary words are used to group messages together**
- ☐ **Allows the user to see that there is new content within specific projects or conversations at a glance**
- ☐ **“Gmail” from Google attempts to do this**
- ☐ **To be successful, classification must happen before the user is notified of the new content**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## Ambient Awareness

---

**How to create a general situational awareness without interruptive messaging**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

**ADMIN 2004  
DEVELOPER**

The value point for ambient awareness

**ADMIN 2004  
DEVELOPER**

- ☐ **Not all content is specific enough or high value enough to justify an interruptive message**
- ☐ **Non specific data can still be valuable in determining priorities**
- ☐ **Ambient Awareness technologies don't need to be actively checked**
- ☐ **The human brain is good at turning general awareness into real data**

[Andrew.Pollack@TheNorth.com](mailto:Andrew.Pollack@TheNorth.com) <http://www.thenorth.com>

## Our brain uses ambient awareness all the time

ADMIN 2004  
DEVELOPER

- ❑ **We don't pay attention to the temperature unless its too cold or too warm**
  - The further from ideal the temperature gets, the greater our attention to it becomes
- ❑ **Other examples of ambient awareness we use all the time include our sense of smell and need for food, water, and sleep**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## A low cost commercial example

ADMIN 2004  
DEVELOPER

- ❑ **A great example of low-cost ambient awareness technology**
- ❑ **Programmed by pointing it to a web page**
- ❑ **Changes color and intensity based on data from the page**
- ❑ **Examples:**
  - The stock market direction
  - Number of messages waiting
  - The size of a help desk queue
  - Number of mentions of you company name in the press

<http://www.thinkgeek.com/gadgets/electronic/5da2/>

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Instant Messaging Agents

ADMIN 2004  
DEVELOPER

- ❑ **Software agents monitor various conditions**
  - Stock price
  - Help desk queue
  - Voice mail count
  - Urgent message queue
- ❑ **Under specific conditions, the software agents “log on” to the instant messaging system with specific user id and passwords**
- ❑ **A glance at the buddy list on his mobile device tells the executive that “Urgent Message Queue” agent is logged in**
  - The executive can query the agent through the instant messenger interface for more detail, or call in and collect the message

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Ambient Awareness Benefits

ADMIN 2004  
DEVELOPER

- ❑ **Not interruptive for low priority issues**
- ❑ **Can convey a general sense of situation at a single glance**
- ❑ **Can increase in intensity and become more interruptive based on changing conditions**
- ❑ **Allow the user to work steadily and with focus through a task, yet notice that something needs attention as the need for intense focus declines**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Fixing the queue process

---

**Filtering out won't work, its time to filter  
up to awareness from a pool of information**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

**ADMIN 2004  
DEVELOPER**

### Current Filtering Problems

---

**ADMIN 2004  
DEVELOPER**

#### ☐ **Filtering occurs after the interruption**

- Sorting the inbox
- Listening to, then discarding voicemail
- Unsolicited advertisement removal

#### ☐ **Even once filtered, volume is too high**

- Reliance on electronic messaging for day to day work on several projects generates dozens or hundreds of valid messages

#### ☐ **Messaging content is spread over several systems and not filtered together**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

### The new approach – filtering UP value

- ☐ **Content from multiple sources gets placed in a general pool**
- ☐ **Sorting and classification agents match new messaging content with existing content**
- ☐ **Content that matches existing projects or documents is placed in context**
- ☐ **Remaining content is indexed on likely importance – from likely spam to possible new customer**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

### Filtered content triggers different notifications

- ☐ **New content in active projects or high priority contexts activates notifications**
- ☐ **Notification of new content in long term or medium priority contexts is done through “ambient awareness”**
- ☐ **Unclassified content or content classified as likely spam generates no interruptive notifications, and is queued for attention when convenient**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Summary – Things to consider

- ☐ **Messaging is more than just email**
- ☐ **Part of the problem is social, but still must be addressed**
- ☐ **Instant messaging will begin to remove the low value content from the inbox**
- ☐ **The formal Memo will make a comeback**
- ☐ **Contextual Messaging will allow more sensible notification and management of tasks**
- ☐ **Ambient Awareness can be effective without interruption – the next big thing**
- ☐ **Filtering out is less effective than filtering up**

[Andrew\\_Pollack@TheNorth.com](mailto:Andrew_Pollack@TheNorth.com) <http://www.thenorth.com>

## Thank you for playing!

- ☐ **We're all trying to figure this stuff out together-- please ask your questions so others can here the answers**
- ☐ **We might even get some IBM people from the audience here to speak up with answers**
- ☐ **You may also contact me directly if you like**
- ☐ **Please fill out your evaluations**
- ☐ **The latest copy of this presentation will also be available at my website: <http://www.thenorth.com>**
- ☐ **For those playing the home game, direct questions & comments to:**

Andrew Pollack
